

Machine Learning Engineering Bootcamp

Capstone: Data Wrangling

Step 5

Learning Objective

- Clean the dataset and address issues such as missing values and outliers.
- Apply data wrangling techniques, including standard datasets and sources.

Criteria	Meets Expectations	Weightage
Time Estimates	20 - 30 Hours	
Completion	☐ Data and code are uploaded to Github (where applicable). (2 points)	2 points
Process and understanding	☐ The submission shows that the student understands how to wrangle and clean data . (3 points) ☐ The submission demonstrates that the student made thoughtful decisions about how to work with missing values and outliers as needed. (3 points)	6 points
Presentation	☐ Well-documented Github repository and code. The Jupyter notebooks for the code provide step-by-step documentation that's easy to follow. (2 points)	2 points

Excellence:

1. The student collected data from multiple disparate sources (APIs, CSVs), and extracted and merged the relevant data, enhancing the quality of the results.

2. *The student explored the data systematically through visualizations that guided their next steps.*
