

Machine Learning Engineering Bootcamp

Capstone Project: Data Collection

Step 2

Learning Objective

- Collect the data for the project from the right source(s).

Criteria	Meets Expectations	Weightage
Time Estimate	3 - 6 Hours	
Completion	☐ Data and code are uploaded to Github (where applicable). ☐ For large datasets over 100MB, the student has used the Git Large File Extension, S3, or another appropriate way to integrate the data.	2 points
Process and understanding	☐ The submission shows that the student understands how to collect relevant data. ☐ The submission includes datasets that were well-chosen and relevant to the problem. ☐ The datasets chosen meet the minimum size requirements (i.e. at least 15K samples).	6 points
Presentation	☐ Well-documented GitHub repository with code and data or pointers to the data. The code and repository	2 points

	document how the data was collected with links to the original sources.	
--	---	--

Excellence:

- 1. The student collected data from multiple disparate relevant sources (APIs, CSVs).*
- 2. The dataset is large (i.e. at least 8GB in size or contains over a million samples).*
