

Machine Learning Engineering Bootcamp

Capstone: Project Proposal

Step 3

Learning Objective

- Choose one executable project out of the three submitted project ideas.
- Write a proposal that identifies a real-world problem and an approach to solve it.

Criteria	Meets Expectations	Weightage
Time Estimate	4 - 6 hours	
Completion	☐ 1 - 2 page Google document (commentable by mentor)	1 point
Process and understanding	☐ The submission demonstrates that the student has articulated a problem statement that is within the scope of this course. (2 points) ☐ The submission demonstrates that the student has selected a problem with a dataset that is relatively clean, easy-to-use, and within the scope of this course. (2 points) ☐ The submission demonstrates the student's ability to justify the need for a significant problem to solve. (2 points) ☐ The submission includes a well-thought-out estimate (developed in collaboration with the mentor) of the computational resources that might be required for this project. (2 points)	8 points

Presentation	☐ The proposal is clear and follows a logical flow in stating the problem to be addressed and the data to be utilized.	1 point
--------------	---	---------

Excellence: The above criteria were met and the submission focuses on a novel problem, perhaps leveraging the student's domain expertise. The student posts their submission to the student community for feedback.
