

Machine Learning Engineering & AI Bootcamp Capstone

Step 4: Survey Existing Research and Reproduce Available Solutions

Summary

Time Estimate: 10 - 20 Hours

Before starting to write any code and build your first model prototype for your Capstone, you will attempt to locate published research around or on the topic of your Capstone project. The goal is to understand what other researchers/engineers have built to solve a similar problem and to reproduce, if possible, their results when they shared their code publicly. After you do this, have a discussion about the results with your mentor and try to agree on the path/approach you will take to build your first prototype.

Ressources

- Paper with Code: <https://paperswithcode.com/>
- Arxiv: <https://arxiv.org/>
- Github & Github Topics: <https://github.com/> (e.g. <https://github.com/topics/deep-learning>)
- Google :)

Project Submission Steps

- Gather Papers/Research and add those links to a file in your Capstone repo
- Share a few candidates papers/notebooks with your mentor and discuss together which one(s) might be best to attempt to reproduce.
- Reproduce results in a notebook form if possible and add a rendered execution to your Capstone Github repo
- Share your Github repo with your mentor and discuss
