

Machine Learning Engineering & AI Bootcamp Capstone

Step 9: Pick Your Deployment Method

Summary

Time Estimate: 2 - 4 Hours

In this step, you will pick how you would like to deploy your project. The right deployment method will vary depending on the scope of your project.

- There are three major ways to deploy your projects: as an API, through a library on an existing framework, or through a shipping product (which can be either a web site end users can access for example, or a mobile app).
- Refer to some of the project examples.
- Be aware of your time management.
- Please refer to Unit 23 which teaches basic tools and unit 24 has more advanced options.

Project Submission Steps

Please submit a link to your Github repository/Google doc, which should contain the following:

- A shortlist of your next steps regarding deployment and engineering. Please discuss with your mentor to decide deployment methods.
